EXP.NO: 11

SD Card Data Writing Application

AIM:

To develop a mobile application that writes user input data into the SD card storage of the Android device.

ALGORITHM:

- Start the application
- Display input field for user to enter text
- Display "Save" button
- User enters data in text field
- User clicks "Save" button
- App checks storage permission
- Create file in SD card storage
- Open file in write mode
- Write user entered text into file
- Close file
- Display success message "Data saved successfully"
- Stop the application

CODE:

```
<!DOCTYPE html>
<html lang="en">
<head>
<meta charset="UTF-8">
<meta name="viewport" content="width=device-width, initial-scale=1.0">
<title>SD Card Storage System</title>
```

```
<style>
:root {
    --sidebar-color: #2c3e50;
    --accent: #3498db;
    --success: #27ae60;
}

body {
    font-family: 'Segoe UI', Tahoma, Geneva, Verdana, sans-serif;
    margin: 0;
    display: flex;
    height: 100vh;
    background-color: #eef2f3;
}

nav {
    width: 240px;
    background-color: var(--sidebar-color);
    color: white;
    padding-top: 20px;
}

nav h2 {
    text-align: center;
    border-bottom: 1px solid #444;
    padding-bottom: 10px;
}

.nav-link {
    display: block;
    padding: 15px 25px;
```

```
    color: #bdc3c7;
    text-decoration: none;
    cursor: pointer;
}

.nav-link:hover {
    background-color: #34495e;
    color: white;
}

main {
    flex: 1;
    padding: 30px;
}

.container {
    background: white;
    max-width: 700px;
    margin: auto;
    padding: 30px;
    border-radius: 12px;
}

textarea {
    width: 100%;
    padding: 12px;
    border: 2px solid #ddd;
    border-radius: 6px;
    margin-bottom: 15px;
}
```

```
button {
    padding: 12px 24px;
    background: var(--accent);
    color: white;
    border: none;
    border-radius: 6px;
    cursor: pointer;
}

.success {
    color: var(--success);
    margin-top: 10px;
    font-weight: bold;
}
</style>
</head>

<body>

<nav>
    <h2>STORAGE-APP</h2>
    <a class="nav-link" onclick="toggleView('save')">Save Data</a>
    <a class="nav-link" onclick="toggleView('view')">View Data</a>
</nav>

<main>
<div class="container">

<section id="save-view">
<h2>Save Data to SD Card</h2>
```

```
<textarea id="dataInput" placeholder="Enter your data here..."></textarea>
<button onclick="saveData()">Save</button>

<div id="msg" class="success"></div>
</section>

<section id="view-view" style="display:none;">
<h2>Stored Data</h2>
<pre id="outputBox"></pre>
</section>

</div>
</main>

<script>
function toggleView(view){
  document.getElementById('save-view').style.display = (view==='save')?'block':'none';
  document.getElementById('view-view').style.display = (view==='view')?'block':'none';
}

function saveData(){
  let data = document.getElementById("dataInput").value;

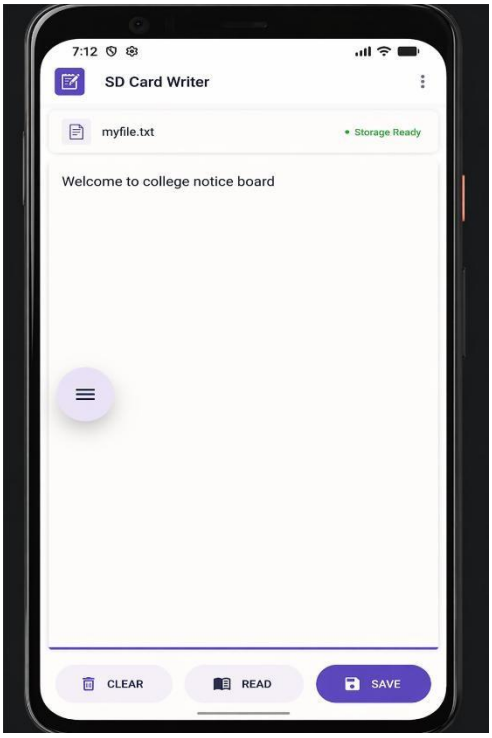
  if(data === ""){
    document.getElementById("msg").innerText = "Enter some data!";
    return;
  }

  localStorage.setItem("sdcard_data", data);
  document.getElementById("msg").innerText = "Data saved successfully to SD card";
}
```

```
window.onload = function(){
   let stored = localStorage.getItem("sdcard_data");
   if(stored){
      document.getElementById("outputBox").innerText = stored;
   }
}
</script>

</body>
</html>
```

OUTPUT:



Result:

The application successfully writes the user-entered data into a file stored in the SD card. The saved file can be accessed later from the device storage.
